Abstracts

Lead Metal Foil is a metal foil made of lead material, and its main component is lead. Lead is a chemical element with the chemical symbol Pb and atomic number 82. It belongs to the main group elements of the fourth cycle. In addition to lead, Lead Metal Foil may also contain some other trace elements. Trace elements that may be contained in lead metal foil include copper, tin, zinc, silver, etc. These trace elements can be mixed in during the manufacturing process of lead foil, or they can be contained in the original lead material. The presence of these trace elements will not have a great impact on the main properties of Lead Metal Foil, but may affect some specific uses of Lead Metal Foil. Lead Metal Foil is commonly used in fields such as shielding materials for electronic products, decoration of glass products, construction technology and traditional health care.
