## Abstracts

According to our (Global Info Research) latest study, the global Lead Nitrate market size was valued at USD 46 million in 2023 and is forecast to a readjusted size of USD 57 million by 2030 with a CAGR of 3.0% during review period.

Lead(II) nitrate is an inorganic compound with the chemical formula  $Pb(NO_3)_2$ . It commonly occurs as a colourless crystal or white powder and, unlike most other lead(II) salts, is soluble in water. Historically, the main use was as a raw material in the production of pigments for lead paints, but such paints have been superseded by less toxic paints based on titanium dioxide. Other industrial uses included heat stabilization in nylon and polyesters, and in coatings of photothermographic paper. Since around the year 2000, lead(II) nitrate has begun to be used in gold cyanidation.

North America plays an important role in global lead chemicals market, especially United States, which has great influence on the development of lead chemicals.

The Europe market developed slowly in the past few years and will keep the trend in the few years, and Europe is also full of much uncertainty, from political elections, trade policy and historical problems. In Europe market, Germany, UK and France are playing significant roles.

Currently, Hanhua Chemical, Orica, Dynakrom, Aerocell and Zhuzhou Jinyuan Chemical are major manufacturers of this industry. Dynakrom is a global leader. In 2019, the sale of Hanhua Chemical was 4236 MT, and the company held a share of 21%. Due to its rich mineral reserves and relatively relaxed environmental policies, the world's leading lead chemical manufacturers are located in China and India.
