Abstracts

The global Lead Wire Type Aluminum Electrolytic Capacitor market size is expected to reach \$ 5337 million by 2032, rising at a market growth of 3.7% CAGR during the forecast period (2026-2032).

In 2025, the global production of Lead Wire Type Aluminum Electrolytic Capacitors reached 18,600 million units, with an average selling price of USD 0.22 per unit. Lead Wire Type Aluminum Electrolytic Capacitors are traditional aluminum electrolytic capacitors that use aluminum foil as electrode material, electrolyte as the dielectric medium, and lead wires as external electrical connections. These capacitors typically adopt cylindrical structures and feature a wide capacitance range, broad voltage ratings, low cost, and mature manufacturing processes. Compared with solid capacitors, lead wire type aluminum electrolytic capacitors provide higher capacitance per unit cost; compared with surface mount aluminum electrolytic capacitors, they are more suitable for large-capacitance and general-purpose power filtering applications. They are widely used in consumer electronics, power adapters, industrial equipment, lighting power supplies, household appliances, audio equipment, communication power systems, automotive electronics, and renewable energy equipment, serving as key components for power rectification, filtering, and energy storage.

The global Lead Wire Type Aluminum Electrolytic Capacitor market remains a large and mature segment within the aluminum electrolytic capacitor industry. Continuous demand from consumer electronics, power equipment, industrial control systems, renewable energy devices, and automotive electronics supports market growth. Due to advantages including high capacitance, low cost, and mature supply chains, these capacitors remain highly competitive in low-to-medium power supplies, industrial equipment, and

general electronic applications. In recent years, as electronic devices move toward miniaturization, higher efficiency, and improved reliability, some applications have shifted toward solid aluminum electrolytic capacitors and hybrid aluminum electrolytic capacitors. However, lead wire type aluminum electrolytic capacitors continue to maintain stable demand in cost-sensitive applications due to their cost and capacitance advantages. Looking ahead, products will continue evolving toward longer lifetime, higher temperature resistance, lower impedance, and environmentally friendly materials, maintaining an important position in industrial power supplies, renewable energy equipment, and consumer electronics.
