According to our (Global Info Research) latest study, the global Leadframe Cleaning Machine market size was valued at US\$ 249 million in 2024 and is forecast to a readjusted size of USD 338 million by 2031 with a CAGR of 4.5% during review period.

The leadframe cleaning machine is a precision automated equipment designed to provide efficient cleaning solutions for the semiconductor manufacturing industry, particularly before critical processes such as die attach and wire bonding. Utilizing advanced plasma cleaning technology, this machine thoroughly removes contaminants from the surface of the workpieces, ensuring that the silver adhesive can be evenly applied and improves adhesion to the chips. Prior to wire bonding, the plasma cleaning process significantly enhances the wettability and activity of the workpiece surface, effectively improving performance and adhesion, thereby increasing the bonding strength and the uniformity of the pull strength of the bonded wires, ensuring high reliability and production efficiency of semiconductor products while reducing manufacturing costs.
