## Abstracts

The global Leadframes market size is expected to reach \$ 5215 million by 2029, rising at a market growth of 3.6% CAGR during the forecast period (2023-2029).

Global leadframes key manufacturers include Mitsui High-tec, Shinko, Chang Hua Technology Co. The top three manufacturers hold about 35% of the global share. Global origins are mainly located in China, Japan, Korea, Taiwan (China), and Southeast Asia, with China being the largest production region with a 27% share. In terms of process type, stamping process leadframes are the largest segment with about 74% share, while in terms of downstream, integrated circuit are the largest downstream segment with 60% share, followed by discrete devices.

Lead Frame is the basic component that delivers electric signal to external circuits and supports the chip inside of semiconductor package mechanically. A lead frame consists of a die mounting paddle and lead fingers. The die paddle serves primarily to mechanically support the die during package manufacture. The lead fingers connect the die to the circuitry external to the package.
