According to our (Global Info Research) latest study, the global Leaf-Spine Fabric Switches market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Leaf-Spine fabric switches, also known as leaf-spine network architecture or Clos network, are a type of network design commonly used in data centers and large-scale computing environments. This architecture is designed to provide high bandwidth, low latency, and efficient connectivity between network devices, such as servers and storage systems. The leaf-spine fabric is named after its physical layout, where switches are organized into two layers: the leaf layer and the spine layer.

The ongoing growth of data-intensive applications, cloud computing, and edge computing could have driven a higher demand for Leaf-Spine Fabric Switches. Data centers require scalable and high-performance network architectures to support these workloads effectively.
