## Abstracts

According to our (Global Info Research) latest study, the global Leafing Aluminum Pigments market size was valued at US\$ 158 million in 2024 and is forecast to a readjusted size of USD 205 million by 2031 with a CAGR of 3.7% during review period.

Leafing aluminum pigment is a kind of flake metal pigment made of high-purity aluminum powder through special processing. Its surface is hydrophobic and has low surface tension. When used in coatings or inks, aluminum flakes can spontaneously float to the surface of the coating to form a continuous metallic luster layer, presenting a bright mirror effect. This type of pigment is widely used in decorative coatings, metallic effect printing inks and other fields, but the weather resistance and corrosion resistance requirements are lower.
