According to our (Global Info Research) latest study, the global Leak Noise Correlator market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The Leak Noise Correlator (LNC) is a device used for detecting leaks in water pipes. It works by comparing the water flow noise at different positions in the pipeline to determine the location of the leak. The LNC typically consists of two sensors that can be placed at opposite ends of the pipeline and measure and compare the time delay of the water flow noise. By analyzing these time delays, the LNC can calculate the approximate distance to the leak location and display it on the device's screen. Using the LNC for leak detection can help quickly and accurately locate the leak point, reducing waste and loss of water resources.
