Leakage protection switch tester is an instrument used to test and detect the performance of leakage protection switch. Leakage protection switch is an electrical device used to protect personal safety. It can detect leakage in the circuit and cut off the power supply quickly in case of leakage to avoid electric shock accidents. Leakage protection switch tester can test and evaluate performance parameters such as operation time and operation current of leakage protection switch by simulating the leakage situation. It usually has a high-precision measurement function, which can accurately detect the action of the leakage protection switch, and provide corresponding test results and reports. The use of the leakage protection switch tester can help users verify whether the performance of the leakage protection switch meets the relevant standards and requirements, and ensure that it can work reliably in actual use.
