According to our (Global Info Research) latest study, the global Leaky Coaxial Cable for Wireless Communications market size was valued at US\$ 407 million in 2025 and is forecast to a readjusted size of US\$ 576 million by 2032 with a CAGR of 5.1% during review period.

In 2025, the global production volume of leaky coaxial cable for wireless communications reached 84.8722 million meters, with an average selling price of 4.5 USD per meter. The global annual production capacity of leaky coaxial cable for wireless communications is approximately 120 million meters, and the gross profit margin is around 25.2%. Leaky coaxial cable for wireless communications is a specially designed coaxial cable primarily used in wireless communication systems. It is characterized by a certain signal leakage capability, allowing electromagnetic waves to radiate along its length in a controlled manner. The upstream of leaky coaxial cable for wireless communications includes high-conductivity copper tape/copper rod, foamed polyethylene insulation material, aluminum-plastic composite tape, and others. The midstream consists of leaky coaxial cable for wireless communications manufacturers, while the downstream mainly covers rail transit, highways, and mining.

The current market for leaky coaxial cable for wireless communications is in a stage of steady growth and mature development, primarily driven by the sustained demand for wireless signal coverage in enclosed or semi-enclosed scenarios such as rail transit, tunnels, mining, and large buildings. As a specialized cable that combines signal transmission and radiation functions, leaky coaxial cable for wireless communications can achieve uniform and stable signal coverage in complex environments, effectively addressing signal blind spots that traditional antenna systems encounter in confined

spaces. With the deepening advancement of 5G network construction and the continuous expansion of emerging application scenarios such as smart transportation and intelligent mining, the market is placing higher demands on performance metrics including bandwidth, transmission loss, and environmental adaptability, driving products toward broader bandwidth, lower loss, and higher reliability. Overall, this market is on a development path where stable demand and technological improvement carry equal weight.
