LED Buoy Lanterns are navigational aids that use light-emitting diodes (LEDs) to provide visibility and guidance in maritime environments. These lights are energy-efficient, long-lasting, and often more durable than traditional incandescent lights. Unlike incandescent bulbs, which rely on heated filaments to produce light and typically consume more energy, LED lights generate illumination through the movement of electrons in a semiconductor, resulting in lower power consumption, reduced heat output, and a significantly longer lifespan—often exceeding 50,000 hours compared to the 1,000 hours typical of incandescent bulbs.
