LED constant current driver chips are integrated circuits specially designed to ensure that LED lamps can obtain stable current under various voltage conditions. They are widely used in lighting, display and indication equipment. These chips ensure the consistency of LED brightness and the extension of life by accurately controlling the output current, while avoiding the problem of unstable light output or premature failure of LEDs caused by current fluctuations. LED constant current driver chips usually have multiple protection functions, such as overheat protection, short circuit protection and overvoltage protection, to improve the reliability and safety of the system. They also support dimming function, allowing users to adjust the brightness of LEDs as needed, thereby achieving energy saving and environmental adaptability.
