Abstracts

According to our (Global Info Research) latest study, the global LED Endoscope Light Source market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The main consumer market of LED Endoscope Light Source is North America and Asia Pacific region. With the gradual recovery of the global economy after the COVID-19 outbreak and the return of major economies to normal, the medical industry will see certain growth. As global medical standards continue to improve, more and more hospitals and clinics are able to perform endoscopic surgery. As a result, the demand for LED Endoscope Light Source will grow within the foreseeable future.

LED Endoscope Light Sources are used in endoscopic surgery. Both rigid and flexible optical endoscopes require an external source of light to illuminate the area that needs to be examined. In the case of surgical procedures the areas in question are usually located in cavities and, therefore, are devoid of natural illumination. The external light sources can either be small and portable, or larger standalone devices. Portable light sources, also commonly known as light handles, are connected to an endoscope body through adapters or couplers. In spite of their compact size, some light handles are able to provide high intensity light, sufficient even for demanding applications.
