An LED engine is a stand-alone module that integrates functions such as an LED light source, optical components, and a thermal management system to produce high-brightness, high-efficiency LED light output. It usually includes one or more LED lamp beads, an optical lens or reflector, heat sink, power drive circuit and other components, aiming to provide a convenient, reliable and easy-to-install LED lighting solution. LED engines are usually used in lighting fields, such as LED lamps, street lights, car lights, stage lights, etc. The LED engine can provide high brightness light output with high energy efficiency and long life. It integrates optical elements, such as lenses or reflectors, that control and direct the LED light to achieve the desired lighting effect. At the same time, the LED engine usually includes a heat sink and a power drive circuit to manage the heat and power supply of the LED to ensure the normal operation and long life of the LED.
