According to our (Global Info Research) latest study, the global Large-scale LNG Terminals market size was valued at USD 2139 million in 2023 and is forecast to a readjusted size of USD 3181.9 million by 2030 with a CAGR of 5.8% during review period.

Rising focus on shale gas production has changed the demand-supply demographic of several energy producing regions across the globe in the past few years. The shale boom in the U.S. is on the verge of making North America, a major importer of crude oil and natural gas in the past years, an exporter of LNG.

The global consumption of LNG is also mounting owing to its cleaner nature compared to conventional petroleum-based fuels. With emission control norms becoming increasingly strict across the globe, domestic, commercial, and industrial sectors will be compelled to switch to cleaner fuels such as LNG in the near future. This factor will also provide a big boost to the overall development of the large-scale LNG terminals market in the next few years.
