## Abstracts

According to our (Global Info Research) latest study, the global LED Light Bulbs market size was valued at USD 33130 million in 2023 and is forecast to a readjusted size of USD 43940 million by 2030 with a CAGR of 4.1% during review period.

LED Light Bulbs [LED Lighting] is a kind semiconductor light-emitting solid device, which can convert the energy from an electric current into light.

LED Light Bulbs Principles:

Terminal voltages of PN junctions form certain barrier potentials, and when the forward bias voltage is added, the barrier potential decreases and most charge carriers in P area and N area diffuse to each other. As the electron mobility is much higher than the holes mobility, large amount of electrons diffuse to P area, causing charge carriers entering P area. These electrons combine with the holes on the valence band with energy emission in the form of light.

Global core LED light bulbs manufacturers include Philips, MLS etc. Asia Pacific is the largest market, with a share about 48%, followed by Europe and North America with the share about 23% and 19%.
