Abstracts

LED lighting power supply is an electronic device that converts the power supply to a specific voltage and current by adjusting the power of the LED to drive the LED light. Due to the working principle of LED lamps and lanterns, the output voltage should be greater than the conduction voltage of LED, followed by the requirement that the working current should not be greater than the rated current of LED. When the LED operating current exceeds the rated current, the LED will quickly appear aging damage. Therefore, the LED lighting power supply is needed for power supply conversion. LED lighting power supply has the characteristics of high reliability, high power and high efficiency.

This report studies the global LED Lighting Supply production, demand, key manufacturers, and key regions.
