LED Load Simulator is a device used to simulate the electrical load that LED (light-emitting diode) lighting fixtures would normally draw from a power source. It is designed to mimic the behavior of LED lights under various operating conditions such as different voltage, current, or frequency. LED load simulators are often used for testing and quality assurance purposes in the manufacturing and development of LED lighting products. They ensure that LED fixtures perform as expected and help manufacturers verify their reliability, efficiency, and compliance with industry standards.
