According to our (Global Info Research) latest study, the global LED Module market size was valued at US\$ 6596 million in 2025 and is forecast to a readjusted size of US\$ 8999 million by 2032 with a CAGR of 4.6% during review period.

A light emitting diode (LED) module is a self-contained LED device designed either to function on its own or to plug into a compatible unit. LED modules are commonly used to create energy-efficient or portable lighting. When powered on, these modules emit bright light from a small bulb. LED module devices include LED book lights, night lights, outdoor lighting, LED headlamps, and LED flashlights, as well as the multiple LED bulb units used in LED lighting fixtures. These units usually have at least one LED bulb contained in a fixture that either powers the LED lights or plugs into a device that powers the LED module. Note: Part LED module enterprises products are not only for their own use, but also sell LED module to downstream consumers, even provide OEM. So, the size of an enterprise includes the amount of sales and self-produced and self-used.

Global LED Module key players include Osram, Philips Lighting, Cree, GE Lighting, Seoul Semiconductor, etc. Global top five manufacturers hold a share about 30%. China is the largest market, with a share about 30%, followed by Europe, with a share about 20 percent.
