Abstracts

According to our (Global Info Research) latest study, the global LED Parking Guidance Screen market size was valued at US\$ 897 million in 2025 and is forecast to a readjusted size of US\$ 1134 million by 2032 with a CAGR of 3.6% during review period.

In 2025, global LED Parking Guidance Screen production reached approximately 3,350 k units?with an average global market price of around US\$ 260 per unit, and a gross profit margin of approximately 20%-40%. LED Parking Guidance Screens are electronic display devices used in parking guidance systems to show real-time parking availability, directional arrows, level information, zone status, and other wayfinding messages for drivers. These screens are typically installed at entrances, ramps, floor intersections, and aisle decision points inside parking facilities. Connected with sensors, cameras, or central software, they help drivers find vacant spaces faster, reduce search time and circulating traffic, and improve parking efficiency, user experience, and facility traffic flow in shopping malls, office buildings, airports, hospitals, and public parking structures. The industrial chain of LED Parking Guidance Screens includes upstream LED beads, display modules, driver ICs, control boards, power supplies, communication modules, metal housings, acrylic panels, cables, and mounting accessories. The midstream focuses on display assembly, PCB integration, firmware programming, brightness control, enclosure fabrication, system testing, and software communication with parking sensors or management platforms. Downstream demand mainly comes from commercial complexes, office buildings, airports, hospitals, campuses, residential projects, and public parking operators. Supporting services include installation, commissioning, system integration, maintenance, spare parts supply, and software upgrades to ensure accurate, real-time guidance and stable long-term operation.
