According to our (Global Info Research) latest study, the global LED PCB market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

LED PCB can be defined as LEDs soldered into the PCB as chips that light up whenever the circuit is connected in some way. These types of PCBs also typically have heat sinks and ceramic bases to hold the circuit in place and allow for smooth operation of the circuit.

According to our Semiconductor Research Center, the global total output value of PCB was about US\$ 81 billion in 2022. With strong drivers from new technology, such as AI, 5G and new energy vehicles, it is estimated that the PCB industry will continue to grow steadily in the next six years. Global PCB manufacturers are mainly located in China mainland, China Taiwan, Japan, South Korea, Europe and the United States. Among them, Chinese local PCB companies hold the biggest share.
