## Abstracts

According to our (Global Info Research) latest study, the global LED Refrigeration Lighting market size was valued at US\$ 602 million in 2025 and is forecast to a readjusted size of US\$ 821 million by 2032 with a CAGR of 4.6% during review period.

Cold storage facilities are vital for the preservation of perishable goods such as food, medicine, and other temperature-sensitive products. These facilities rely on maintaining a constant low-temperature environment to prevent spoilage, maintain product quality, and ensure the safety of the end-users. One of the critical components of cold storage facilities is lighting. Lighting systems provide visibility for workers to perform tasks and locate products in the storage area. However, traditional lighting systems, such as fluorescent and HID lights, can consume a considerable amount of energy and generate heat, which can affect the temperature of the facility and increase cooling costs. Therefore, facility owners are seeking energy-efficient lighting options that provide consistent illumination, reduce heat generation, and lower energy consumption. LED lighting is a popular choice for cold storage facilities due to its energy efficiency, long lifespan, and low maintenance costs.
