Abstracts

According to our (Global Info Research) latest study, the global LED Shelf Lighting market size was valued at US\$ 623 million in 2025 and is forecast to a readjusted size of US\$ 930 million by 2032 with a CAGR of 6.1% during review period.

LED shelf lighting is a linear lighting system specifically designed for display shelves, display racks, and display cases. It utilizes high-brightness, low-power LED light sources to provide uniform, soft, and adjustable lighting effects. The system typically consists of LED strips, power drivers, connectors, and controllers, and can be embedded or installed in shelf panels, uprights, or back panels. The product supports multiple color temperatures (2700K-6500K), color rendering index (CRI>80), dimming methods (PWM, 0-10V, DALI), and intelligent control (Bluetooth, Zigbee, Wi-Fi). Traditional shelf lighting suffers from uneven lighting, high energy consumption, and difficult maintenance. LED shelf lighting, through its efficient and energy-saving light source and flexible installation methods, enhances product visibility, improves customer experience, and reduces operating costs, making it particularly suitable for retail and exhibition scenarios with high display effect requirements. The average price of this product is approximately US\$10 per meter, with global sales of approximately 60.5 million meters.
