According to our (Global Info Research) latest study, the global Left-Hand Helical Threaded Insert market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A helical threaded insert, also known as a helicoil or thread insert, is a type of fastener used to reinforce or repair threads in a material. It is typically made of stainless steel or other durable materials. The insert has a coiled or helical shape, with internal threads matching those of the surrounding material. By screwing the insert into a pre-drilled hole, it creates new, stronger threads that can resist stripping or wear. Helical threaded inserts are commonly used in metal, plastic, or other materials with low thread strength or when there is a need for thread repair. They provide a reliable and long-lasting solution for improving the durability and performance of threaded connections.
