Left ventricular assist device is a mechanical pump that is used for the patients who are suffering from heart failure disease. The left ventricular assist device is surgically implanted inside the patient's chest. The left ventricular assist device works with the heart to pump more blood, and improves other organ function by improving blood flow to the brain, kidney, liver, and other body organs. The device continuously takes blood from the left ventricle and passes it to the aorta. Doctors implant this device for treatment of severe heart conditions such as chronic cardiac function disorders, and heart failure.
