## Abstracts

According to our (Global Info Research) latest study, the global Legal Document Automation Software market size was valued at US\$ 107 million in 2025 and is forecast to a readjusted size of US\$ 161 million by 2032 with a CAGR of 6.0% during review period.

Legal Document Automation Software is a specialized tool that utilizes technologies such as natural language processing and machine learning to intelligently parse, analyze, and manage legal documents. Its core functions typically include automatic extraction and review of contract clauses, comparison and revision of legal documents, compliance checks, risk point identification, and intelligent document classification and archiving. This type of software aims to free lawyers and legal professionals from tedious and repetitive paperwork, significantly improving document processing efficiency and accuracy, reducing the risk of human error, and providing data support for legal judgment through learning from massive amounts of cases and legal provisions. It does not replace legal professionals, but rather serves as an efficient and intelligent auxiliary tool to enhance the standardization and intelligence of legal services.

The global development of Legal Document Automation Software exhibits significant regional differences. The North American market is the most mature, boasting numerous leading vendors with advanced technology and high customer acceptance of AI, particularly in large law firms and corporate legal departments. The European market follows closely, but places greater emphasis on data privacy and local language support, with GDPR compliance being a core requirement in product design. The Asia-Pacific market (especially China and Australia) is experiencing rapid growth, with Chinese vendors focusing on Chinese natural language processing and localized

compliance scenarios, rapidly penetrating the market through both policy and market forces. Overall, the market is evolving from general-purpose tools to intelligent solutions deeply integrated with vertical industries.
