A Legionella filter is a type of filtration system designed to remove Legionella bacteria from water sources. Legionella bacteria can cause Legionnaires' disease, a severe form of pneumonia, when inhaled in water droplets. Legionella filters are commonly used in cooling towers, hot tubs, and other water systems to prevent the spread of Legionella bacteria and protect public health. These filters work by trapping and removing the bacteria from the water, reducing the risk of contamination and potential outbreaks of Legionnaires' disease.
