According to our (Global Info Research) latest study, the global Lens Materials with Refractive Index of 1.6 market size was valued at US\$ 311 million in 2025 and is forecast to a readjusted size of US\$ 464 million by 2032 with a CAGR of 6.0% during review period.

Lens materials with a refractive index of 1.6 are mid-index optical materials commonly used in eyeglass lenses, offering a balance between thickness reduction and optical clarity compared to standard index materials like CR-39 (1.5). They are typically made from high-quality plastics such as polycarbonate blends or advanced resins, providing lighter weight and improved aesthetics for moderate prescriptions by producing thinner lenses. These materials also generally feature good durability, scratch resistance, and compatibility with coatings such as anti-reflective, UV-blocking, and blue-light filters, making them a popular choice for everyday eyewear that combines comfort, visual performance, and style. In 2024, global lens materials with a refractive index of 1.6 production reached approximately 19,936 tons, with an average global market price of around US\$ 14.17 per kg.

The market for lens materials with a refractive index of 1.6 is primarily driven by the rising demand for lightweight, thin, and high-performance optical lenses that offer both comfort and durability. Increasing prevalence of vision correction needs due to aging populations, coupled with growing screen time and digital eye strain, is fueling higher adoption of these materials in prescription eyewear. In addition, consumer preference for premium lenses that balance aesthetics and functionality encourages opticians and manufacturers to promote 1.6 index materials as a mid-range option between standard 1.5 and higher-cost 1.67 or 1.74 lenses. Technological advancements in polymer

chemistry and coating processes also enhance scratch resistance, UV protection, and optical clarity, further driving market growth. Rising disposable incomes and the expanding eyewear market in emerging economies add momentum to the global demand for 1.6 index lens materials.
