Abstracts

Lentiviral are vectors that are derived from the virus known as human immunodeficiency virus and is used to transfer gene in the cells, such as mammalian cell and others.

Lentiviruses are used for transfection in non-dividing and actively dividing cell. This acts as an advantage to another type of retrovirus. The lentiviruses fall in the category of a retrovirus. The lentiviral expression system is developed, which can influence the gene of interest. The commercially available lentiviral expression systems are available in combination with tag sequence, reporter gene, promoters and multicistronic vectors are also available for desired protein expression. These vectors are used for research and development purpose recombinant protein expression, protein characterization, in-vitro transcription, and other functional arrays.

SCOPE OF THE REPORT:

This report studies the Lentiviral Expression Systems market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Lentiviral Expression Systems market by product type and applications/end industries.

Based on the expression system components, global lentiviral expression system market is segmented lentiviral promoter, which is further sub-segmented as lentivirus promoter vectors, lentivirus promoterless vectors, lentiviral fusion tags lentivirus packaging systems and other accessories. Based on the application type, global lentiviral expression system market is segmented as recombinant protein expression, functional assays, protein characterization, In vitro transcription and other application for research and study purpose. On the basis of end user, the global lentiviral expression system market is segmented into biotechnological companies, pharmaceutical
