Lentiviral Packaging Services is a biotechnology service that is used to produce lentiviral particles for gene transduction and gene therapy research. In this service, professional scientists transfect the customer-provided plasmid and packaging plasmid into HEK293T or other cell lines, and then use specific cell culture methods and virus packaging technology to produce large quantities of lentiviral particles. These particles can be used for in vitro or in vivo gene transduction experiments or gene therapy research.

The main advantages of Lentiviral Packaging Services are its efficiency and the ability to produce high-quality lentiviral particles. Additionally, this service can customize different packaging plasmids and vector combinations according to customer needs to meet different experimental and application requirements. In conclusion, Lentiviral Packaging Services is an important biotechnology service that provides strong support for research and applications in the fields of gene transduction and gene therapy.
