According to our (Global Info Research) latest study, the global Lentiviral Production System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Lentiviruses are a subclass of retroviruses, but unlike other retroviruses, lentiviruses can integrate into the genome of non-dividing cells. As retroviral vectors, lentiviral vectors never contain genes for replication. Therefore, production of lentivirus requires propagation in packaging cell lines (e.g., HEK293 cells transfected with plasmids encoding virion proteins). Lentiviruses are commonly used in cell therapies.
