## Abstracts

The global Lentiviral Production System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Lentiviruses are a subclass of retroviruses, but unlike other retroviruses, lentiviruses can integrate into the genome of non-dividing cells. As retroviral vectors, lentiviral vectors never contain genes for replication. Therefore, production of lentivirus requires propagation in packaging cell lines (e.g., HEK293 cells transfected with plasmids encoding virion proteins). Lentiviruses are commonly used in cell therapies.

This report studies the global Lentiviral Production System production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Lentiviral Production System, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
