## Abstracts

The global Lentivirus Packaging System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Lentiviral vectors are gene therapy vectors based on HIV-1 (human immunodeficiency virus type I) and herpesvirus VSVG coat proteins. It is a type of retrovirus in which the virulence gene has been knocked out and replaced by a foreign target gene. This vector can effectively integrate foreign genes into the host chromosome to achieve persistent expression. In terms of infection ability, it can effectively infect various types of cells such as neurons, liver cells, cardiomyocytes, tumor cells, endothelial cells, stem cells, etc., thereby achieving good gene transduction effects.
