## Abstracts

The global LEO Satellite Communication Phased Array Antenna market size is expected to reach \$ 1222.1 million by 2029, rising at a market growth of 10.4% CAGR during the forecast period (2023-2029).

**Demand growth:** With the rapid development of the satellite communications industry, the demand for LEO satellite communications phased array antennas will continue to increase. This kind of antenna has the advantages of high speed, large bandwidth and flexibility, so it has broad application prospects in the field of satellite communications.

**Technological innovation:** In order to meet the growing market demand, the technology of LEO satellite communication phased array antennas is also constantly improving. In the future, with the continuous innovation of technology, the performance of phased array antennas will be further improved, and the cost will also be gradually reduced.

Communication satellites can be divided into low orbit satellites (LEO), medium orbit satellites (MEO) and geosynchronous orbit satellites (GEO). Compared with medium orbit satellites (MEO) and geosynchronous orbit satellites (GEO), low orbit satellites (LEO) is about 160 to 2,000 kilometers from the height of the earth, which is relatively low, making the transmission delay short. Satellite Communication Phased Array Antenna plays a vital role during this process.

The LEO phased array antenna is antenna arrays that have the unique ability to change the shape and direction of the radiation pattern without physically moving the antenna.
