Abstracts

The global Leuco Malachite Green Reagent market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Leuco Malachite Green Reagent is a chemical substance used in analytical chemistry to detect the presence of certain chemical compounds, especially reducing agents. The reagent is prepared by dissolving malachite green dye in acid and then adding sodium sulfite as a reducing agent to convert the dye into its leuco form. When the reagent is added to a sample solution containing a reducing agent, the leuco form of malachite green is oxidized back to the colored form, producing a blue-green color that indicates the presence of the reducing agent. This reaction is commonly used in the analysis of substances like sugars, aldehydes, and phenols.
