Level Crossing Obstacle Detector is a safety device used at railway level crossings to detect the presence of obstacles, such as vehicles or pedestrians, on the tracks. It employs various sensing technologies, including radar, lidar, or cameras, to monitor the area around the crossing. When an obstacle is detected, the system triggers warning signals, such as flashing lights or alarms, to alert approaching trains and prevent potential accidents. This technology enhances safety by ensuring that the crossing is clear before a train arrives, thereby reducing the risk of collisions.
