Level Crossing Obstruction Detector is a safety device in railway systems designed to detect obstacles—such as vehicles, pedestrians, or debris—within a railway level crossing where tracks intersect with roadways. Using technologies like radar, laser sensors, or cameras, the LCOD continuously monitors the crossing area and sends alerts to the railway signaling system or directly to approaching trains if an obstruction is present. This system enables trains to slow down or stop, activates warning signals, and may trigger other safety mechanisms to prevent collisions and ensure the safety of both rail and road users at the crossing.
