According to our (Global Info Research) latest study, the global Li-ion Battery for E-bikes market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

A lithium-ion battery is a member of a family of rechargeable battery types in which lithium ions move from the negative electrode to the positive electrode during discharge and back when charging. Li-ion batteries use an intercalated lithium compound as one electrode material, compared to the metallic lithium used in a non-rechargeable lithium battery. The electrolyte, which allows for ionic movement, and the two electrodes are the constituent components of a lithium-ion battery cell.

Li-ion Battery for E-bikes is a kind of lithium battery used in specialized electric bicycle. All lithium-ion technologies are based on the same principle: Lithium is stored in the anode (or negative electrode) and transported during the discharge to the cathode (or positive electrode) via an organic electrolyte.

In the North American market, Johnson Matthey, BMZ, LG Chem, Chicago Electric Bicybikes, Lico Technology, Joolee, Kayo Battery, EVPST, Shenzhen Mottcell, Tongyu Technology and CneBikes are the major manufacturers of lithium-ion batteries for Electric bikes.
