According to our (Global Info Research) latest study, the global Library Automation Management System market size was valued at US\$ 872 million in 2025 and is forecast to a readjusted size of US\$ 1051 million by 2032 with a CAGR of 2.7% during review period.

Library Automation Management System is a type of automation software with the function like acquisition, cataloging, public access, indexing and abstracting, circulation, serials management, and reference etc.

Library Automation Management System includes commercial system and open source system.

Commercial system includes integrated library system (ILS), library management system (IMS), library service platform (LSP), etc. Most of the products on the market are commercial systems, they usually have several modules.

Open source system is alternative technology that provide internet access to information databases, library collections and digital archives. Since open source products are usually free, this report does not include revenue from open source products.

The Library Automation Management System market is relatively fragmented, though there are several big players in the world. Clarivate (Ex Libris, Innovative Interfaces), SirsiDynix, OCLC, Follett and Axiell, etc. are the key suppliers in the global Library Automation Management System market. Top 5 took up about 71% of the global

market.

North America and Europe are the two largest regions of Library Automation Management System in the world in the past few years and it will keep increasing in the next few years. These two regions took up about 71.1% of the global market.

Library Automation Management System has wide range of applications, such as School Libraries and Public Libraries. And School Libraries segment was the most widely used area which took up about 44.65% of the global market.

Market Drivers:

#### D1: Digital Transformation

The shift towards digital content is a major driver for the adoption of LAMS. Libraries are digitizing their collections to provide easier access to information, reduce physical storage requirements, and cater to the increasing demand for digital resources. LAMS enable libraries to manage these digital resources efficiently, making it easier for patrons to find and access information

#### D2: Enhanced User Experience

The modern library user expects a seamless, convenient, and personalized experience, akin to that provided by commercial online services. LAMS vendors are responding by developing user-friendly interfaces, mobile applications, and self-service options that improve user satisfaction and engagement.

#### D3: Growth of E-Learning

The rise of e-learning platforms and online education has increased the demand for digital library resources and services. LAMS facilitate the integration of library resources with e-learning systems, enabling libraries to support the learning and research needs of students and educators in virtual environments.
