Abstracts

According to our (Global Info Research) latest study, the global Library Entry Reservation System market size was valued at US\$ 2754 million in 2025 and is forecast to a readjusted size of US\$ 4031 million by 2032 with a CAGR of 5.9% during review period.

A library entry reservation system is an application system used to pre-book, control quotas, and verify the identity of library visitors. It typically consists of a reservation front-end (webpage/mini-program/app), a back-end management platform, a database, and interfaces with access control/gate systems/reader management systems. In situations involving pandemic control, limited space, peak visitor flow, or the need for refined management, the system allows for reservations, flow control, and time-slot management of library visitors to avoid overcrowding and security risks. It also provides the library with accurate entry data for statistical analysis, service optimization, and resource allocation. Compared to the traditional 'free entry and exit,' the entry reservation system allows libraries to 'operate according to capacity,' finding a balance between safety, user experience, and management efficiency. In the future, the entry reservation system is likely to no longer be an isolated module but rather integrated into the 'library operations platform': forming an integrated platform with seat reservations, event reservations, visitor management, indoor navigation, and data analysis, using reservation data to drive the optimization of opening hours, collection layout, and service configuration.
