## Abstracts

The global Library Smart Terminal market size is expected to reach \$ 1349 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

Library smart terminals typically refer to self-service devices and intelligent interactive terminals deployed within libraries for readers or librarians, such as self-service borrowing and returning machines, self-service card issuing machines, self-service inquiry machines, smart bookshelves, and book reservation lockers. They generally integrate touchscreens, human-computer interfaces, RFID/barcode recognition modules, card readers (library cards/ID cards), printing modules, barcode scanners, and network communication modules. They transform traditional 'manual service windows' into 'self-service,' alleviating librarian workload, improving borrowing and returning efficiency, and reducing queuing time. The average price of this product is approximately \$5,000 per unit, with global sales of approximately 180,000 units.

This report studies the global Library Smart Terminal production, demand, key manufacturers, and key regions.
