According to our (Global Info Research) latest study, the global LiDAR Cover market size was valued at US\$ 120 million in 2024 and is forecast to a readjusted size of USD 401 million by 2031 with a CAGR of 18.7% during review period.

LiDAR cover is a protective device installed on the outside of LiDAR. It is mainly used to protect the internal precision optical components and electronic components from environmental damage, such as rain, dust, collision and extreme temperatures. It is usually made of highly transparent materials to ensure that the emission and reception of laser pulses are not interfered with, and it must also have weather resistance (anti-ultraviolet, anti-corrosion) and mechanical strength. The design focuses on aerodynamic shape to reduce wind resistance, and may add anti-fouling coating or heating function to prevent fogging or snow accumulation.
