According to our (Global Info Research) latest study, the global LiDAR Technology market size was valued at US\$ 3164 million in 2025 and is forecast to a readjusted size of US\$ 11830 million by 2032 with a CAGR of 21.2% during review period.

Lidar is a product of the combination of laser technology and radar technology. It is composed of transmitters, antennas, receivers, tracking frames and information processing. It can measure target position (distance and angle), movement status (speed, vibration, and attitude) And the shape has become one of the necessary devices for advanced assisted driving and intelligent driving. It is used in the automotive industry or other ground motor vehicles, Rail Transit, and radar in the surveying and mapping industry.

The leading lidar companies mainly include Hesai Technology, RoboSense, Seyond, Continental, Ouster, Hexagon AB, Trimble, Sick AG, and Valeo. The market share of the top five companies in the world is close to 32.63%.

In terms of lidar types, there are mechanical lidar and solid-state laser (including semi-solid) radar. Mechanical lidar is large in size, high in accuracy, high in cost, and can rotate 360 degrees; while solid-state lidar is low in cost. In 2023, the market will still be dominated by mechanical lidar, with the market size reaching US\$1899 million. We estimate that solid-state/semi-solid lidar will gradually occupy the market in the next few years, and by 2030, the market share of solid-state/semi-solid lidar will exceed 48%.

As far as the downstream segments of lidar are concerned, this report subdivides the industry into: Automotive, robotics, smart infrastructure, rail transportation, construction,

mining and agriculture, and others (UAV, aerospace and defense). Among them, lidar is widely used in the automotive industry (ADAS and driverless driving), and the market size will reach US\$1074 million in 2023. We expect that automobiles will remain the main market for lidar in the next few years.
