Abstracts

Life science IT plays a crucial role in life sciences by providing sophisticated tools and solutions to manage, analyze, and interpret complex biological data. Life science IT solutions are designed to streamline various processes within the life sciences domain, including research, drug discovery, clinical trials, and healthcare management. Life science IT software typically includes applications for data management, analysis, and visualization, facilitating the collection, storage, and interpretation of complex biological and clinical data. Life science IT solutions enable researchers to conduct experiments, analyze results, and make informed decisions in areas such as drug discovery, genomics, proteomics, and personalized medicine. Additionally, life science IT software often incorporates features for regulatory compliance, quality control, and collaboration, ensuring that organizations adhere to industry standards and best practices while fostering teamwork and knowledge sharing among multidisciplinary teams.

According to our (Global Info Research) latest study, the global Life Sciences IT market size was valued at US\$ 21930 million in 2023 and is forecast to a readjusted size of USD 45170 million by 2030 with a CAGR of 10.7% during review period.

The life sciences IT market size is expected to grow significantly, owing to high demand for advanced analytical tools to analyze and manage large data generated in the healthcare sector, rise in adoption of the life science IT technology in the drug discovery and development, and growing trend towards digitalization of the healthcare system. According to life sciences IT market forecast, rise in demand for advanced analytical tools is expected to act as a significant driver for the growth of the life sciences IT market. The exponential increase in the volume of data generated within healthcare, fueled by electronic health records, genomic information, and real-time patient monitoring systems, has resulted in increase in demand for sophisticated analytical

solutions for efficient analysis and management. For instance, according to a 2023 report by the National Library of Medicine, over 80% of digital data in healthcare is available as unstructured data, requiring new forms of data processing and standardizing that prove challenging to health researchers.
