Abstracts

Life science deals with the scientific study of organisms such as microorganism, human being, and animals. It includes broad range of areas of study such as biology, anatomy, health sciences, and medical sciences. The software used in life science allows a user to increase efficacy & reduce the cost of deploying valuable IT infrastructure. For instance, software as a service (SaaS) model for life science offers a pay per use model, which provides more feasibility to store patient data.

Rise in need for the improvement of operational efficiency and enhanced performance of the organization by collection & management of data efficiently by using life sciences software drive the growth of the global life sciences software market. However, high cost associated with the implementation of software impedes the market growth. Adoption of mergers and acquisitions (M&A) strategies among various life sciences companies is expected to offer a major opportunity for market expansion.
