Abstracts

According to our (Global Info Research) latest study, the global LiFePO₄ Cylindrical Battery Cell market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

LiFePO₄ Cylindrical Battery Cell has good consistency, high production efficiency, and strong heat dissipation capacity at the system level. After the size upgrade, it can improve to a certain extent the original low single energy density, the large number of battery cells required for the module, and the resulting poor lifespan and complex management. Cylindrical lithium iron phosphate can effectively reduce the cost of battery assembly. The battery cell adopts the end-face welding full-ear process, which has the characteristics of low internal resistance, large discharge current, long cycle life, and high degree of automation.
