According to our (Global Info Research) latest study, the global LiFSI Additive market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Lithium bis(fluorosulfonyl)imide (LiFSI) is an electrolyte additive commonly used in lithium-ion batteries (LIBs). It serves several important functions in battery chemistry and can provide various benefits. LiFSI helps stabilize the electrolyte, especially at high voltages. It forms a stable solid electrolyte interface (SEI) layer on the surface of the electrodes, which reduces unwanted side reactions between the electrolyte and the electrodes. This enhances the battery's cycling stability and overall lifespan.
