## Abstracts

According to our (Global Info Research) latest study, the global Lift and Cruise Type eVTOL market size was valued at US\$ 657 million in 2024 and is forecast to a readjusted size of USD 12180 million by 2031 with a CAGR of 52.3% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The Lift and Cruise Type eVTOL retains many characteristics of traditional fixed-wing aircraft while offering greater cabin layout flexibility. During hover and low-speed flight, the aircraft operates in vertical take-off and landing mode. As speed increases, the rotor speed gradually decreases until they stop, at which point the wings take over to provide lift, with forward thrust managed by a propeller system. The hybrid wing configuration allows for higher flight speeds and reduced vibration levels, improving maneuverability. However, it also has drawbacks, including increased structural weight and additional drag.
