A Lifting Boring Machine (LBM), also known as a Raise Boring Machine, is a specialized piece of heavy equipment used in underground mining, civil engineering, tunnel construction, and other applications to create vertical or inclined boreholes or shafts. LBM is designed for drilling shafts from one level of an underground mine or construction site to another.

Lifting Boring Machine are constantly innovating in design and technology. Manufacturers use new materials, sophisticated control systems and automation technologies to improve the performance, efficiency and safety of their equipment. Automation and digital controls are widely used in Lifting Boring Machine. This helps to improve operational accuracy, monitor equipment status and data analysis, while reducing potential operational risks. Environmental and sustainability factors are becoming increasingly important in the design and operation of the lift rig sector. Manufacturers and operators take steps to minimise resource wastage and environmental impact. Manufacturers often offer customised Lifting Boring Machine to meet the specific requirements of different projects. This helps to ensure that the equipment is adapted to the needs of the particular project. Safety is always a concern as lift rig operations can involve high risks. Training and safety standards have been enhanced. With the growth in infrastructure development worldwide, the demand for Lifting Boring Machine is increasing. They play a key role in projects such as mining, tunnelling and underground reservoir construction. Lift drilling rigs play an important role

in geological exploration and mineral extraction, especially when mining vertical or inclined shafts or axial holes.
