Lifting plate clamps are tools used to lift and carry heavy objects such as steel plates and metal plates. They are usually composed of jaws, handles, and a locking mechanism. The jaws are specially designed to firmly clamp the edge of the steel plate, and the handles can apply force to help the lifting operation. Lifting pliers are widely used in industries such as steel, shipbuilding, and machinery to improve work efficiency and safety. Common types of lifting pliers include single jaws and double jaws, which are suitable for handling steel plates and objects of different specifications.
